OUR CHILDREN ARE THEIR CUSTOMERS.

We are relieved that the NHS will now not routinely prescribe cross-sex hormones (CSH) to under 18s but alarmed that unscrupulous private providers continue to target vulnerable children and their families.

NHS England has warned GPs against a shared care arrangement with "any unregulated provider" and specifically name Anne Trans Healthcare Ltd and GenderGP as posing an "ongoing safety risk to children and young people in the UK".

Most young people who are prescribed cross-sex hormones are lesbian, gay or bisexual, but gay teens aren't sick. They don't need to be 'cured' with drugs or surgery. Join us in calling for a complete ban on the private prescription of cross-sex hormones to kids.
